Recent Developments

Early in the period, markets in both Canada and the US experienced a brief honeymoon period, driven by greater economic growth expectations following the inauguration of US President Trump. However, economic growth expectations were pared back later in the period, and replaced with greater levels of economic uncertainty with the announcement of certain US trade and economic policies - namely, the announcement of the "Liberation Day" reciprocal tariffs in the US on April 2nd, and the subsequent pause on those tariffs announced on April 9th; and the announcement of the One, Big, Beautiful Bill in the US on May 20, 2025.

During the period, the Bank of Canada reduced its overnight policy rate twice, each by 25bps, to end the period at a level of 2.75%. In their March 2025 policy rate announcement, the Bank of Canada noted: "Economic growth in the first quarter of 2025 will likely slow as the intensifying trade conflict weighs on sentiment and activity".

During the period, the Federal Reserve (the "Fed") kept the upper bound of the Fed Funds Target Rate steady at a level of 4.5%. The Fed's policy stance reflected cautiousness over mixed economic data releases – especially between "soft" survey-based data and "hard" real economic data – and the potential for a resurgence of inflation.

The Fund maintains a sizeable position in short dated, liquid government securities as both credit and interest rate risks remained elevated. The weight to Government securities in the portfolio is 17.6% while the weight to securities in the portfolio with ratings of AAA/AA is 41.1%. The higher quality, liquid positions will allow the Fund to take advantage of future opportunities in the credit markets at more favourable valuations. The weight to securities in the portfolio with ratings of BB or below is 10.5% - this relatively low weighting is indicative of the lack of opportunities in the lower quality segment of the credit markets by virtue of tight credit spreads.

During the period, the Fund added the following corporate bond issues: Muskrat Falls/Labrador Transmission Assets 3.83% Jun 1, 2037; Honda Canada Finance Inc. 3.874% May 22, 2030; Hydro Ottawa Capital 4.372% Jan 30, 2035; MetLife Global Funding I 4.149% Jun 6, 2033; Stonlasec8 Middle LP 4.517% Jul 11, 2055; TD Bank Sr. Unsec. 4.133% Jan 9, 2032/33; Toyota Credit Canada Inc. 3.74% May 21, 2030; VW Credit Canada Inc 4.42% Aug 20, 2029; First Nations Finance Authority 4.05% Jun 1, 2035.

The top three securities that contributed to the Fund's performance over the period were: Nestle Holdings Inc. 2.192% Jan 26, 2029; Air Canada 4.625% Aug 15, 2029; TD Bank 4.477% Jan 18, 2028.

The Fund's duration was 5.6 years at the end of the period, which is inline with FTSE Canada All Corporate Bond Index duration of 5.6 years.

There have been no changes to the Manager or Portfolio Manager, or change of control of the Manager, or of the Fund. There have been no actual or planned reorganizations, mergers or similar transactions involving the Fund.

There were no changes to the membership of the Fund's Independent Review Committee ("IRC").

Related Party Transactions

The Manager provides or arranges to provide for the provision of all general management and administrative services required by the Fund in its day-to-day operations, including but not limited to, calculating and reporting the net asset value of the Fund and its series, preparing all offering documents, unitholder recordkeeping and other administrative services. The Manager receives a management fee for these services. The fee is calculated based on a percentage of the net asset value of the Fund as disclosed in the simplified prospectus.

The Fund paid \$1,350,743 (including HST) in management fees to the Manager for the period ended June 30, 2025 (June 30, 2024 - \$1,357,424).

The Portfolio Manager is responsible for all investment advice provided to the Fund including providing investment analysis and recommendations, making investment decisions and arranging for the acquisition and disposition of portfolio investments. Fees for providing these services are included in the management fee. Portfolio management fees for the Portfolio Manager's services are paid from the management fee.

The Manager paid \$659,411 (including HST) to the Portfolio Manager for the period ended June 30, 2025 (June 30, 2024 - \$644,231).

The Manager relied, or may rely on standing instructions from the IRC in respect of securities traded amongst mutual funds, closed end funds, managed accounts or pooled funds managed by the Manager or an affiliate of the Manager. In such cases the Manager is required to comply with the Manager's written policies and procedures presented to the IRC and provide periodic reports to the IRC in accordance with National Instrument 81-107.

Notes

- The information is derived from the Fund's unaudited semi-annual and/or audited annual financial statements. All per unit figures presented are referenced to net assets determined in accordance to IFRS Accounting Standards as issued by the International Accounting Standards Board ("IASB").
- Net assets and distributions are based on the actual numbers of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the financial period. This table is not intended to be a reconciliation of beginning to ending net assets per unit.
- Distributions were paid in cash or reinvested in additional units, or both.
- This information is provided at the end of the period shown.
- The management expense ratio ("MER") is based on the total expenses of the period ended, including the Fund's proportionate share of the MER, if any, of any underlying fund in which the Fund has invested, and is expressed as an annualized percentage of daily average net asset value during the period.
- The Fund's portfolio turnover rate indicates how actively the Fund's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a fund's portfolio turnover rate in a period, the greater the trading costs payable by the fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a fund. The portfolio turnover rate is calculated based on the lesser of purchases or sales of securities divided by the weighted average market value of portfolio securities, excluding short term securities.
- The trading expense ratio ("TER") represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period. Where the Fund invests in any underlying fund, the TER includes the Fund's proportionate share of the commissions of any underlying fund in which the Fund invested.
