Recent Developments

The U.S. Federal Reserve made two additional quarter-point interest rate cuts during the fourth quarter. The central bank acknowledged that economic activity is strong, and the labour market reasonable. While inflation has come down, it remains higher than their two percent objective. Investors were surprised when the Federal Reserve cautioned about continued aggressive rate cuts into the future. Inflation numbers going forward may be muddled with the President-elect imposing tariffs and deporting unauthorized immigrants. His other election promises of tax cuts and looser regulation may also prove inflationary.

The Bank of Canada reduced its overnight interest rate as economic activity softened due to lower business investment and exports. However, consumer spending and housing activity picked up following lower interest rates. Employment growth has slowed, but wage growth remains elevated. Lower immigration and tariffs from the incoming U.S. administration are expected to weaken our economic growth. The Canadian dollar has depreciated significantly against the U.S. dollar, which may affect consumer sentiment and increase import prices.

The Fund continues to maintain large positions in liquid government securities as both credit and interest rate risks remained elevated. The fund holds 13.9% in Federal Government bonds; the weight in AAA/AA securities is 36.4%. The higher quality, liquid positions will allow the Fund to take advantage of future market opportunities. The weight in high yield securities is 11.3% as spreads on high yield bonds remain very tight.

During the year, particular new issues that the Fund participated in are Coastal GasLink Pipeline LP (amort) 5.857% Jun 30, 2049, Coastal GasLink Pipeline LP (amort) 5.857% Mar 30, 2049, BNS CB 4.246% Mar 20, 2034, Pembina Pipeline Corp 5.67% Jan 12, 2054, BNS Sr. Unsecured 4.442% Nov15, 2034/35, Hertz 12.625% Jul 15, 2029 144A (USD) and Hertz 8% PIK (non-cash) Jul 15, 2029 144A. The top performers for the fund were Long Corporate Bonds (Coastal Gas in particular), LRCNs, TransCanada Pipelines FRN May 15, 2067 (USD) and Air Canada 4.625% Aug 15, 2029.

The Fund's duration was 5.8 years at the end of the year which is inline with FTSE Canada All Corporate Bond Index duration of 5.8 years.

There have been no changes to the Manager or Portfolio Manager, or change of control of the Manager, or of the Fund. There have been no actual or planned reorganizations, mergers or similar transactions involving the Fund.

Effective June 30, 2024, Paul Fahey resigned as a member of the Fund's Independent Review Committee ("IRC"). Effective July 1, 2024, Donna Peters-Imbrogno was appointed as a member of the IRC.

Notes

- 1 The information is derived from the Fund's audited annual financial statements. All per unit figures presented are referenced to net assets determined in accordance to IFRS Accounting Standards as issued by the International Accounting Standards Board ("IASB").
- 2 Net assets and distributions are based on the actual numbers of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the financial period. This table is not intended to be a reconciliation of beginning to ending net assets per unit.
- 3 Distributions were paid in cash or reinvested in additional units, or both.
- 4 This information is provided at the end of the period shown.
- 5 The management expense ratio is based on the total expenses of the period ended and is expressed as an annualized percentage of daily average net asset values during the period.
- 6 The Fund's portfolio turnover rate indicates how actively the Fund's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a fund's portfolio turnover rate in a period, the greater the trading costs payable by the fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a fund. The portfolio turnover rate is calculated based on the lesser of purchases or sales of securities divided by the weighted average market value of portfolio securities, excluding short term securities.
- 7 The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period.
