## Recent Developments

The U.S. Federal Reserve made two additional quarter-point interest rate cuts during the fourth quarter. The central bank acknowledged that economic activity is strong, and the labour market reasonable. While inflation has come down, it remains higher than their two percent objective. Investors were surprised when the Federal Reserve cautioned about continued aggressive rate cuts into the future. Inflation numbers going forward may be muddled with the President-elect imposing tariffs and deporting unauthorized immigrants. His other election promises of tax cuts and looser regulation may also prove inflationary.

The Bank of Canada reduced its overnight interest rate as economic activity softened due to lower business investment and exports. However, consumer spending and housing activity picked up following lower interest rates. Employment growth has slowed, but wage growth remains elevated. Lower immigration and tariffs from the incoming U.S. administration are expected to weaken our economic growth. The Canadian dollar has depreciated significantly against the U.S. dollar, which may affect consumer sentiment and increase import prices.

During the year, The Fund's equity weight increased to 40.4% due to asset level performance. On the fixed income side, the Fund continues to be invested in Lysander-Canso Broad Corporate Bond Fund for 52.1% of the total portfolio. The remaining 7.3 % is invested in Lysander-Canso Short Term and Floating Rate Fund.

There have been no changes to the Manager or Portfolio Manager, or change of control of the Manager, or of the Fund. There have been no actual or planned reorganizations, mergers or similar transactions involving the Fund.

Effective June 30, 2024, Paul Fahey resigned as a member of the Fund's Independent Review Committee ("IRC"). Effective July 1, 2024, Donna Peters-Imbrogno was appointed as a member of the IRC.

### Notes

- 1 The information is derived from the Fund's audited annual financial statements. All per unit figures presented are referenced to net assets determined in accordance to IFRS Accounting Standards as issued by the International Accounting Standards Board ("IASB").
- 2 Net assets and distributions are based on the actual numbers of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the financial period. This table is not intended to be a reconciliation of beginning to ending net assets per unit.
- 3 Distributions were paid in cash or reinvested in additional units, or both.
- 4 This information is provided at the end of the period shown.
- 5 The management expense ratio is based on the total expenses of the period ended and is expressed as an annualized percentage of daily average net asset values during the period.
- 6 The Fund's portfolio turnover rate indicates how actively the Fund's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a fund's portfolio turnover rate in a period, the greater the trading costs payable by the fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a fund. The portfolio turnover rate is calculated based on the lesser of purchases or sales of securities divided by the weighted average market value of portfolio securities, excluding short term securities.
- 7 The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period.
