The Fund did not borrow money during the year except for immaterial short-term cash overdrafts.

Recent Developments

During the year, markets defied expectations as trade policy disruptions, idiosyncratic credit events, and delayed U.S. economic data heightened uncertainty. Beneath the headlines, a broader theme of caution persisted, reflected in consumer confidence surveys, subdued corporate hiring intentions, and ongoing concerns surrounding tariffs, immigration, and fiscal policy. Labour markets in both the U.S. and Canada remain fragile, while core inflation continues to exceed central bank targets

Throughout the year, the Bank of Canada (the “BoC”) reduced the overnight interest rate by 100 bps to 2.25% as trade conflicts weighed on economic activity. Employment growth slowed, influenced by lower immigration levels and the impact of U.S. tariffs on select sectors. Despite these pressures, consumer spending has remained resilient. The Canadian dollar appreciated against the U.S. dollar but remains below historical averages, which may contribute to higher import prices. The BoC has signalled that it expects to remain on hold for an extended period as monetary policy hands off to fiscal policy.

During the year, the Federal Reserve (the “Fed”) cut the upper bound of the Fed Funds Target Rate by 75 bps to 3.75%. The Fed’s stance reflected caution amid mixed economic data, including rising unemployment, even as core inflation remained above target.

The weight of equities and equity funds in the portfolio is 45.5%, reflecting the Fund’s balanced exposure to risk assets. The fixed income component is primarily invested in the Lysander-Canso Broad Corporate Bond Fund (50.4%) and the Lysander-Canso Short Term and Floating Rate Fund (4.1%). The higher-quality, liquid positions of these underlying corporate bond funds enable the Fund to capitalize on future market opportunities at more favourable valuations. During the year, the Fund added iShares Core Dividend Growth to its holdings.

Canso’s guiding principle in managing the Fund is to assume risk only when adequately compensated—a philosophy that applies to both interest rate and equity risk.

There have been no changes to the Manager or Portfolio Manager, or change of control of the Manager, or of the Fund. There have been no actual or planned reorganizations, mergers or similar transactions involving the Fund.

Effective June 30, 2025, James McGill ceased to be a member of the Fund’s Independent Review Committee (“IRC”). Effective

June 30, 2025, Mary Anne Wiley was appointed as a member of the IRC.

Notes

- The information is derived from the Fund's audited annual financial statements. All per unit figures presented are referenced to net assets determined in accordance to IFRS Accounting Standards as issued by the International Accounting Standards Board ("IASB").
- Net assets and distributions are based on the actual numbers of units outstanding at the relevant time. The increase (decrease) from operations is based on the weighted average number of units outstanding over the financial period. This table is not intended to be a reconciliation of beginning to ending net assets per unit.
- Distributions were paid in cash or reinvested in additional units, or both.
- This information is provided at the end of the period shown.
- The management expense ratio ("MER") is based on the total expenses of the period ended, including the Fund's proportionate share of the MER, if any, of any underlying fund in which the Fund has invested, and is expressed as an annualized percentage of daily average net asset value during the period.
- The Fund's portfolio turnover rate indicates how actively the Fund's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a fund's portfolio turnover rate in a period, the greater the trading costs payable by the fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a fund. The portfolio turnover rate is calculated based on the lesser of purchases or sales of securities divided by the weighted average market value of portfolio securities, excluding short term securities.
- The trading expense ratio ("TER") represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period. Where the Fund invests in any underlying fund, the TER includes the Fund's proportionate share of the commissions of any underlying fund in which the Fund invested.
