## Recent Developments

---

During the period, global markets were defined by a striking disconnect between resilient risk assets and a volatile macroeconomic backdrop. Despite geopolitical tensions in the Middle East, persistent inflation, and a shifting narrative toward higher rates, both credit and equity markets remained remarkably resilient, as demonstrated by tight credit spreads, massive debt issuance, and blockbuster IPOs. Historically tight credit spreads appear increasingly at odds with interest rate volatility, persistent inflation, and growing late-cycle pressures. While fundamentals remain strong across select industries, others are beginning to weaken as economic headwinds build.

Throughout the period, the Bank of Canada (the "BoC") held overnight interest rates at 2.25%. The BoC has continuously highlighted weak economic activity in Canada and ongoing uncertainty surrounding U.S. trade policy. The BoC has also clearly signalled that it will remain on hold for an extended period as monetary policy passes the baton to fiscal policy.

During the period, the Federal Reserve (the "Fed") held the upper bound of the Fed Funds Target Rate at a level of 3.75%. Newly appointed Fed Chair Kevin Warsh reaffirmed the Fed's dual mandate and emphasized the committee's goal of restoring price stability. Markets interpreted the messaging as hawkish, with additional rate hikes in the second half of the year now fully reflected in U.S. swap market pricing.

The Fund maintains a sizeable position in liquid government securities as both credit and interest rate risks remained elevated. The weight to Government securities in the portfolio is 24%, while the weight to securities in the portfolio with ratings of AAA/AA is 49%. The higher quality, liquid positions will allow the Fund to take advantage of future opportunities in the credit markets at more favourable valuations.

During the period, the Fund added the following corporate bond issues: Aéroports de Montréal 6.95% April 16, 2032; Bank of Montreal 4.166% June 15, 2034; Bank of Nova Scotia 3.616% January 30, 2032; Canadian Imperial Bank of Commerce 3.65% January 13, 2032; Enbridge Gas Inc. 3.59% November 22, 2047; Montreal International Fuel Facilities Corporation 3.709% April 10, 2031; New York Life Insurance Company 4.20% May 9, 2033; Toronto-Dominion Bank 3.687% January 9, 2032; Toronto-Dominion Bank 5.918% July 31, 2086.

The top three securities that contributed to the Fund's performance over the period were: Government of Canada Real Return Bond 0.50% December 1, 2050; Manulife Financial Corporation 5.883% June 19, 2081; Great-West Lifeco Inc. 3.60% December 31, 2081.

Canso's guiding principle in the management of the Fund is to take risk when adequately compensated, which extends to both interest rate risk and credit risk. At June 30, 2026, the Fund's duration was 7.1 years which is above the benchmark duration of 7.0 years.

There have been no changes to the Manager or Portfolio Manager, or change of control of the Manager, or of the Fund. There have been no actual or planned reorganizations, mergers or similar transactions involving the Fund.

There were no changes to the membership of the Fund's Independent Review Committee ("IRC").

\* Series O recommenced operations on June 27, 2025.

4) This information is provided at the end of the period shown.

5) The management expense ratio ("MER") is based on the total expenses of the period ended, including the Fund's proportionate share of the MER, if any, of any underlying fund in which the Fund has invested, and is expressed as an annualized percentage of daily average net asset value during the period. Effective January 1, 2025, the Fund paid a management fee of 1.05% (formerly 1.15%) per annum for Series A units and 0.55% (formerly 0.65%) per annum for Series F units.

6) The Fund's portfolio turnover rate indicates how actively the Fund's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the period. The higher a fund's portfolio turnover rate in a period, the greater the trading costs payable by the fund in the period, and the greater the chance of an investor receiving taxable capital gains in the period. There is not necessarily a relationship between a high turnover rate and the performance of a fund. The portfolio turnover rate is calculated based on the lesser of purchases or sales of securities divided by the weighted average market value of portfolio securities, excluding short term securities.

7) The trading expense ratio ("TER") represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the period. Where the Fund invests in any underlying fund, the TER includes the Fund's proportionate share of the commissions of any underlying fund in which the Fund invested.
